

 PERENTEC® automatic Lagger and Utility presses are easily operated thanks to their pneumatic systems.

They feature new higher power pressing, fully adjustable, and a variety of bucks for specialist applications.

The wide opening bucks, facilitate both the pressing operation and the use of the steam iron. Operation of the press head may be controlled by pedals (AP version), in order to leave the operator's hands free. In this case, to ensure operator safety, a safehands protection frame is fitted to the press head.

Alternatively, the head of the press may be controlled by two buttons (AB version), which have to be pushed simultaneously. The presses are available with built-in vacuum unit as required, or for central supplies operation.

The P 87 has a faster lowering action than P 88, and is particularly suitable for rapid service drycleaning shops, press centres and clothing industry.

Furthermore P87 is equipped with a shading device controlled by a lever that allows the press head to be lowered without pressing it on the lower buck: in this way it is possible to steam and vacuum the clothes without pressing them.
